CLAIMS 1-24 ARE PENDING

1. The following is an examiner's statement of reasons for allowance:

Duplex systems of two computers, one active and the other on standby, were well known in the art at the time of the invention [Microsoft Computer Dictionary, Fourth Edition, 1999]. Databases residing on two computers in which one database mirrors the other in real time correspond to duplex databases. Mirrored databases are taught at least by Masuda et al, US 6,226,51 [COL 3 lines 9-16]. Buddy nodes that replicate data sets also correspond to duplex databases and this is taught by Dias et al, US 5,907,849 [COL 2 lines 1-16].

Synchronization of databases inherently involves the transfer of information from one database to another, which is typically done by sending messages over a network in response to a database transaction at one database that modifies the database [Koliczew, US 6,298,072; Schneider COL 35 line 65 to COL 36 line 12, where the databases contain access policy information].

Change lists were well known in the art in the context of database synchronization, as evidenced by Jain et al, US 5,737,601 [COL 3 lines 1-13].

However, the particular combination of database synchronization in a duplex system involving a change list table is neither anticipated nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
